

**SKULL BASE**  
I N S T I T U T E

Welcome to the Skull Base Institute (SBI), the first and only center devoted exclusively to the art of Skull Base Surgery. We are the world's premiere institute to perform every procedure using minimally invasive endoscopic techniques. After pioneering endoscopic pituitary surgery, SBI is currently the only center to perform fully endoscopic acoustic neuroma, meningioma and microvascular decompression surgery in the posterior fossa. These skills make SBI's team uniquely qualified to operate on the most complex area of the human anatomy and contributes to the success in treating over 4,500 patients suffering from Skull Base Disorders.

Enclosed is information about our practice along with patient forms. In order for us to have your complete patient records and be able to give you a comprehensive consultation, we ask that you **fill out all the information requested** and mail or fax back the forms to our office along with an **enlarged, legible, front and back copy of your insurance card**. Additionally, we kindly ask that you forward **all MRI or CT scans and reports**.

We thank you in advance for your cooperation and should any issues arise, please do not hesitate to contact the Skull Base Institute with your questions and/or concerns.

Sincerely,

The Skull Base Institute Team
